

enCore Energy Responds to Letters to the Editor

enCore Energy wishes to thank the citizens of Edgemont and Hot Springs for joining us at our Dewey-Burdock Dinners and Open Houses held recently in September. Both meetings ran for two hours with many thoughtful and knowledgeable questions raised, answered and then followed up at www.deweyburdock.info.

We are also pleased to be hosting our next Dinners and Open Houses in Edgemont, Hot Springs and Custer in the first week of November, again focused on providing a respectful forum for all citizens to seek answers to any and all questions. We believe in open and transparent dialogue, a foundation of our democracy, and trust we have provided a forum for all citizens to participate, regardless of personal opinions regarding the in-situ recovery process, uranium, nuclear energy or the need for domestic energy production. We also respect the need to protect water within our operations, it is important to everyone and we at all times expect to be held accountable for best practices to ensure sound management of water use.

The Dewey-Burdock project has gone through over a decade of permitting and assessment by several levels of government, and all information on in-situ recovery, the Dewey-Burdock project and our company is publicly available. As a public company, all technical information is required to be reviewed and confirmed by qualified, independent third parties and then regulators whose professional standards require extremely thorough and necessary due diligence of our plans and procedures. While we are disappointed to see some inaccurate facts and unsubstantiated claims appear by those opposed to responsible resource extraction, we will stay the course, provide information that is all verifiable through the mandatory project review and assessment process required by the State and federal governments.

The nuclear industry is one of the most regulated industries in the United States with numerous advancements over 50 years including the environmentally responsible extraction process of in-situ recovery. We are proud to be part of an important industry in the United States providing a valuable source of energy. This is not the 1950's and 1960's type of uranium mining anymore, and just like the airline industry or automotive industry, the nuclear industry has evolved into one of the safest industries in the country.

enCore Energy is proud to be able to advance the Dewey-Burdock project which will provide strong economic growth in South Dakota through high-paying rural jobs, tax revenue, education initiatives, local business development while also leading the nation in the development of a domestic source of energy.

See you in November, everyone welcome.

November 1, 2022	5 – 7 pm	Edgemont Senior Citizens Center
November 2, 2022	5 – 7 pm	Hot Springs – American Legion Club
November 3, 2022	5 – 7 pm	Custer Senior Citizens Center
